DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

I have already written most of the logic, so all that was left to do was implement it inside a factory function.

_____

2. What parts of encapsulating your logic were hard?

Battling to understand the reason for returning an object instead of just displaying the preview.

_____

3. Is abstracting the book preview a good or bad idea? Why?

Yes. I think that having one function that houses all the logic for completing a task like the book preview makes code cleaner, more intuitive and generally easier to understand.

_____
